

Acotel Net will be present at NFMT 2016 in Baltimore

The company will promote products and services dedicated to the intelligent management of energy and building automation

Baltimore, 14 March 2016 - Acotel Net, a business unit of Acotel Group SpA, provides energy efficiency services, including energy management, smart metering and automation through monitoring, resulting in the optimization of energy consumption and money savings. Acotel Net will be exhibiting with a booth at **the National Facilities Management and Technology Conference & Exposition (NFMT) 2016** to be held in **Baltimore** from **March 22 to 24**.

Created in 2001, the NFMT Conference has now become an essential point of reference for all professionals and operators responsible for the management, maintenance, construction and renovation of **non-residential buildings**.

After showcasing its solution at other important industry events, the NFMT 2016 represents an important opportunity for Acotel Net to show the **versatility** and **usefulness** of its products and services beyond the Italian borders.

Acotel Net provides an end-to-end solution for the optimized management of energy and building automation to perfectly meet the requirements from the client.

Thanks to the intelligent gateway (**MAU-LAN**), power meter (**Energy Node**) and the **Cloud Platform** which will be showcased in the NFMT Baltimore show, it is possible to measure, monitor, analyze, control and automate in real time, the energy performance of the facility or equipment of interest.

Using the cloud platform that has been developed entirely by Acotel Net, you can easily customize the web interface to manage the real-time data and events recorded by the hardware devices located at the facility.

The results are processed, aggregated and compared based on customer requirements and an energy performance analysis report is prepared.

For those clients who already have the hardware to measure energy data and only need the software, Acotel Net can provide its Cloud Platform which is compatible with other industry approved measuring instruments available on the market.
